SHORT BIO. My research focuses on causal decision making (NeurIPS-25, UAI-26a, ICLR-26) and causal effect identification (NeurIPS-24, UAI-26c). I investigate how to formally model diverse real-world problems within a causal framework and derive optimal decisions from such structured representations.

In particular, I develop methods for robust decision-making in settings under uncertainty (NeurIPS-25), domain shifts (UAI-26a), and even scenarios involving counterfactual actions (ICLR-26).
