

SHORT BIO. My research focuses on causal decision making (NeurIPS-25, UAI-26, ICLR-26) and causal effect identification (NeurIPS-24). I investigate how to formally model diverse real-world problems within a causal framework and derive optimal decisions from such structured representations. In particular, I develop methods for robust decision-making in settings under environmental uncertainty (NeurIPS-25), domain shifts between training and deployment environments (UAI-26), and even scenarios involving counterfactual actions (ICLR-26).
