

SHORT BIO. During my Ph.D., I focused on *causal decision-making* (NeurIPS-25, UAI-26a, ICLR-26) and *causal effect identification* (NeurIPS-24, UAI-26c). I investigated how to formally model diverse real-world problems within a causal framework and derive optimal decisions from such structured representations.

In particular, I developed methods for robust decision-making under uncertainty (NeurIPS-25), domain shifts (UAI-26a), and even counterfactual actions (ICLR-26).
